

3 ideas

- 1) My project will be a seasonal recreation center and habitat park.
- 2) My project will be about enjoying all four of Chicago's seasons, developing an appreciation for the environment, and being part of the community. The facility will be open to the weather in many ways. It will also use minimal energy and ideally generate what it needs.
- 3) My project will be developed because there is more to Chicago than 3 months of warmth. As can be seen by the success of the Grant park ice rink, various pumpkin patches, the botanical gardens, or other seasonal events people are excited to try new activities all year round. The only problem is that too often new activities are located in intimidating specialized facilities, the equipment is too expensive, or they are simply not close to the community. This facility will offer a diverse range of activities and programs lead by an educated staff to reactivate the south side lakefront in a positive community building way all year round.

- 1) My project will be a golf clubhouse for nerds
- 2) My project will be about creating a central location for a plethora of games to be enjoyed with likeminded individuals within the city.
- 3) My project will be developed because there is nowhere in the country that caters to this audience. It is a completely untapped market which has the potential for profit. The project entails developing an extremely custom program and building to fit the exact needs of the gaming community. This entails gaming tables, technologies, food and beverage, etc all customized to the gamers. The video game industry is one of the largest and fastest growing in the country and showing no signs of slowing down. Add to this board, card, and table top games and you have the makings for a very large market that currently just play in cramped game stores or their parent's basement... I hope to be able to present a project that solves a very unique program in a creative yet realistic way.

1)My project will be an aquarium

2)My project will be about creating an exhibit at a zoo or similar venue

3)My project will be developed because zoos or aquariums are always developing new exhibits to draw in people. I have always been interested with blending nature and the built environment into one harmonious project.
